Our Goal & Objectives

Nurturing Young Leaders, Strengthening Health, Empowering Futures

Enhance Health Knowledge

Improve adolescents' understanding and status regarding health and nutrition.

Intervention Area

5 urban slums of Ahmedabad city, Gujarat, India

Build Life Skills

Empower adolescents with essential life skills education to improve well-being.

Intervention Period

December 2021 to December 2023

Reached out 1748 Adolescents (10-19 years) across 3,000 households of urban slums of Ahmedabad city.

Our Approach

Adolescent-Centred

Integrated health and life skills education tailored to young people's needs.

Family Involvement

Active engagement of families in supporting adolescent health and development.

Frontline Workers

Collaboration with ASHAs and Anganwadi workers for community-level impact.

Strategies and Activities

Mapping and Assessments

Household and baseline surveys conducted via mobile apps to tailor interventions to adolescents' specific needs.

Strengthening Health Knowledge and Behaviours

Continuous counseling on nutrition, anemia prevention, and menstrual hygiene through home visits, education sessions, and mass awareness campaigns.

Developed IEC materials

Dietary Practices

Recipe demonstrations and Mother-Daughter and Mother-Son Campaigns to promote healthy eating habits and Iron rich recipes.

Monitoring Health Progress

Health Check-Up Camps

Regular camps organised with IFA supplementation provided to adolescents.

Haemoglobin Monitoring

Continuous tracking of haemoglobin levels to assess anaemia reduction.

BMI Assessment

Regular body mass index measurements to monitor nutritional status improvements.

Strategies and Activities

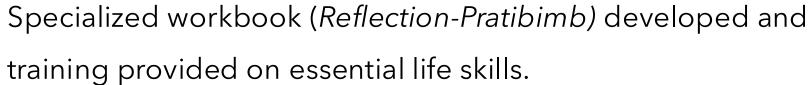

Building Adolescent Leadership

Youth Champions

Identified and trained adolescent leaders to drive change in their communities.

Field Deployment

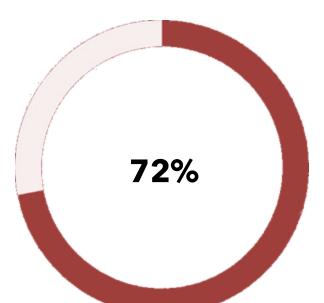

Youth Champions actively engaged in community activities and peer education.

ASHAs and Anganwadi Workers enhanced their skills through training.

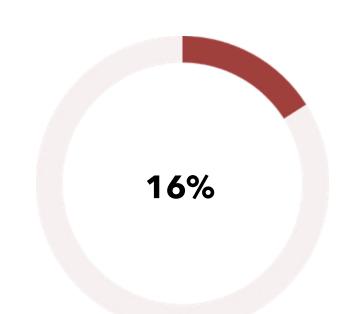

Key Results

Practices improved from 65% to 91% among adolescent girls.

Nutrition & BMI

80%

1,169 adolescents showed increased BMI

82%

Boys (566 out of 690)

Improved BMI value.

Average increased from

17.2 Kg/m² to 18.5

Kg/m²

78%

Girls (603 out of 777)

Improved BMI value.

Average increased from

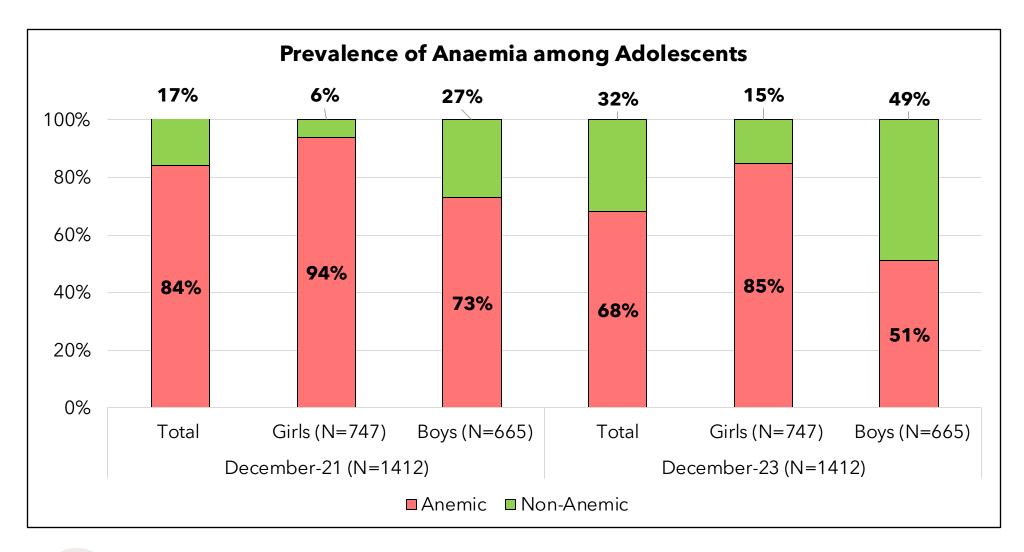

18.0 Kg/m² to 19.2

Kg/m²

BMI status assessed using WHO BMI-for-Age criteria (boys & girls).

Prevalence of Anaemia

Initial Prevalence 84% (1183/1412)

Improvement Rate

69% Adolescents increased Hb levels

Girls' Hemoglobin Improved from 9.89 g/dl to 10.8 g/dl

Boys' Hemoglobin

Increased from 10.8 g/dl to 12 g/dl

Enhanced Knowledge

67%

Balanced Diet

Up from 13% at baseline

69%

Meaning of Anaemia

Up from 3% at baseline

78%

Prevention from Anaemia

Up from 1% at baseline

91%

Menstrual Hygiene

Girls practicing proper hygiene, up from 65%

Ranjan's father

to go out. Ranjan will learn as experience new things. After watching the drama, I understand how important it is for her. All her friends are going, and she will enjoy it too.

Voices from the Ground

Speaking to 150 students in a Vasna school, I said confidently, "Menstruation is natural – no fear, no shame. Let's break the silence and end harmful taboos."

- Renu Prajapati, 19 years

"My haemoglobin was 7 g/dl, now it's 14.0 g/dl. I stopped eating packaged foods and take iron folic acid tablets regularly."- Rohan Dantani, 14 years

"After life skills training, I feel confident to express my views openly and stand for what's right." – Smit Dantani, 15 years

"My haemoglobin increased from 9.0 g/dl to 11.7 g/dl after I quit packaged snacks and learned about nutritious food."Urvashi, 17 years

Key Lessons Learned

- Peer-led models with Youth Champions significantly enhance participation and sustainability.
- Life skills education plays a vital role in health outcomes.
- Sustained Behaviour and nutrition changes need ongoing support. Extending the project or adding phased follow-ups is key for long-term impact.
- Multi-sectoral collaboration improves service delivery.
- Family and community engagement is essential for lasting change.
- Regular monitoring motivates adolescents to take responsibility.

Recommendations for Scale

Integrate Life Skills

Add life skills education to school curriculum to empower adolescents with knowledge and decision-making abilities.

Engage Communities

Implement gender-sensitive health programs and train healthcare providers in counselling to create supportive environments.

Ensure Coverage

Implement government programs in all schools, including private institutions, for comprehensive reach.

Promote Collaboration

Foster multisectoral partnerships across health, education, and social sectors for holistic outcomes.

Establish Data Systems

Create robust monitoring systems for adolescents aged 10-19 to enable targeted interventions.

Investing in adolescent life skills and well-being reduces inequality, helps meet national development targets, and sets up future generations for better social and economic outcomes.

My participation was made possible through the generous support of the
